

Risk Management: Market Orders

Target exchange rates that are better than current market rates.

Market orders allow you to respond immediately to changes in exchange rates by setting a target that is better than the current market rate.

LIMIT ORDERS

Target the rate you want

Limit orders allow you to target a rate that is better than the current market rate. You set the amount and the currency you want to exchange and if the market moves to your desired level, we'll automatically complete a trade and lock in your gains.

STOP LOSS ORDERS

Manage your downside risk

Stop loss orders can help protect against market volatility by setting a worst-case exchange rate. If the market moves to your risk threshold your trade will be triggered automatically ensuring you are not exposed to further losses.

MARKET ORDERS & RATE ALERTS DELIVERED

1

Market orders allow you to take advantage of market movements by specifying the amount of currency you wish to convert at a rate that is better than the current market rate.

2

Stop loss orders can help protect against market volatility by setting a worst-case exchange rate and ensuring you are not exposed to further losses.

3

Set up personalized rate alerts to monitor currency trends. When your currency pair reaches your desired rate, we will send you an email or SMS alert.

4

Our foreign exchange specialists are able to design and implement various solutions for our clients' unique FX Payable, FX Receivable, FX Conversion, and FX Risk Management needs.

FX volatility offers both risk and opportunity. Use market orders to respond to immediate changes to exchange rates at any time 24/7.
